Panel discussion

Moving beyond the pilot stage, from those who have

- From city examples of successful initiatives, learn how the broad structure of government can work as a foundation for start-ups and SME's who hold innovative technology but work in a narrow part of the smart city ecosystem
- Working towards solution driven trials that solve set problems identified by the city to help citizens. Ensure the potential of the partnership is realised by offering a genuine value to citizens across the local authority, becoming an effective use of resources.

Keynotes

Wednesday, 10 April 2019 12:20 - 13:00

CHAMPIONING CITIZEN FOCUSED SOLUTIONS DURING AN ERA OF CHANGE

Cities that thrive through changing economic times are those who take initiative to understand and respond to citizen needs with innovative, effective and efficient solutions. It is also cities that understand that a proactive approach to a sustainable citizen-driven future doesn't have to cost exponential amounts.

The growing need for sustainable, liveable futures is becoming increasingly apparent across the public and private sectors. Opportunities to gain insight, explore challenges and to engage in collaboration is imperative to ensure that cities are driving opportunities for their citizens and are not being left behind.

We understand the challenges local authorities face to make cities work for their citizens. We appreciate that is difficult to deliver meaningful change alone. Smart to Future Cities has been trusted for eight years to bring together the smart city community to deliver practical, scalable solutions through city-to-city learning and collaboration.

Join us as we engage the smart city community around citizen focussed solutions and to move towards cities of the future.

Kind Regards,

Launa Foster, Conference Producer

“

Great event to network with municipal and corporate leaders regarding new trends and best practice around IoT and smart city applications. Innovative. Inspirational. Incentive. Time very well spent"

A case study into planning for community need: H...

Presentation

How sensors, smart control systems and data in urban planning is preserving cultural heritage in the city of tomorrow: A case study of Liverpool and the ROCK Project

- What is the ROCK project and how does the approach enhance sustainable development in cities?
- What's in it for citizens? First-hand insight into wellbeing and health, the impact of urban greening and the importance of democratic access to City Cultural Heritage assets within the urban planning process
- How technology encourages citizen integration with Cultural Heritage and preserves heritage environments
- Why knowledge sharing between cities is vital, uplifting and accelerating smart approaches to urban planning

Smart regions: Opening access of smart cities

Thursday, 11 April 2019 14:20 - 14:40

Suzanne Jameson
